Deputy Registrar-General.

TO HON. W. J. HANNA,
Registrar-General of Ontario.

REPORT UPON

Births, Marriages and Deaths

FOR THE YEAR 1913

The Forty-fourth Annual Report of vital statistics for the Province of Ontario for the year ending December 31st, 1913, shows a considerable increase in the number of births, marriages and deaths, over the report of 1912.

During the year, 125,831 registrations were made as compared with 119,865 in 1912; an increase of 5,966 or over 4.9 per cent. more than in the preceding year.

The following table shows comparisons between 1912 and 1913.

The cities contributed 41.7 per cent. of all births, the towns 6.3 per cent. and the rest of the Province, 51.9 per cent. The ratio per 1,000 population is 24.0 or 1.6 above that of 1912.

ILLEGITIMATE BIRTHS.

The number of illegitimate births was 1,394 or 138 more than last year, being 21.6 per 1,000 births as compared with 21.3 for 1912; a slight increase. In 1912, the cities gave a ratio per 1,000 births of 39.1 as compared with 38.1 for 1913. The ratio in the towns for 1912 was 14.6 and in 1913, it is 12.7.

Taking the rural municipalities alone, the ratio is as follows. In 1912, it was 9.4 and in 1913, it is 8.9. It is readily seen that the cities and towns contribute the more largely to the number of illegitimate births. This is invariably the case. Not all of the illegitimate births occurring in the cities are offspring of city residents. It is only in cities and towns that institutions are found where these births may take place. Some of the institutions are not only prepared for occurrence of the birth, but oftentimes relieve the mothers of their children. These places, known as maternity homes, accommodate unfortunate women and girls from all over the Province, as well as from points outside the Province, and beyond the confines of Canada.

MARRIAGES.

The number of marriages registered during the year was 26,998 or 10.0 per 1,000 of population. This is a decrease of 1,847 as compared with last year, largely due to the amendment of *The Marriage Act*, which makes necessary a fifteen day residence of one of the parties in the proposed place of marriage. This amendment was made necessary on account of the unusually large number of residents of the United States coming over to Windsor, Niagara Falls, and other points to be married. The Department, believing that abuses of *The Marriage Act* were occurring, had the change made with the result that, while in Niagara Falls in 1912 the number of marriages was 839, or 86.7 per 1,000 of population, the number in 1913 was reduced to 492 or 40.9 per 1,000 of population. In Windsor in 1912, the number was 3,429 or 176.2 per 1,000 of population; in 1913 this became 1,423 or 65.8 per 1,000. Even these figures are abnormal. The following is interesting.

The amendment referred to came into force in May, 1913. The number of marriages reported from Niagara Falls, Ontario, in the period of January to May, inclusive, was, in 1912—264, and in 1913—279, an increase of 5.2 per cent. In the period of June to December the number of marriages reported from this place was 574; in 1913 the number dropped to 213, a decrease of 63 per cent. for that period. In Windsor, Ontario, for the period January to May, inclusive, 1912, the number of marriages was 1,104 and in 1913, 927, a decrease of 16.1 per cent., for the last seven months of 1912 the number was 2,325. For the same period in 1913 there were but 496, a decrease of 78.7 per cent.

Following this amendment to *The Marriage Act*, it was discovered that a certain hardship was entailed upon the residents of Ontario who desired to be married in another municipality than that in which they had their usual place of abode. But as there was no intention of restricting the liberties of the people of our own Province, the Department invariably grants permission to an issuer to issue a license under such circumstances. This also applies to British born residing in the United States and desiring to be married in Ontario.

On the whole, the amendment, while preventing the abuse of *The Marriage Act*, has had a beneficial effect in keeping the Department in closer touch with the marriage question. The Department uses every precaution to keep the issuance of marriage licenses in the Province above reproach, but, notwithstanding its efforts, a number of violations occur, owing to the cupidity of certain issuers. These have been warned that further violations of the law will mean their dismissal.

DEATHS.

The number of deaths registered for the year was 34,317, a ratio of 12.7 per 1,000 of population. This is an increase of 2,167 over 1912.

The following are the ten highest rates of mortality:

TEN HIGHEST CAUSES OF DEATH.

Diseases of Arteries	1,116	3.29
Bright's Disease	1,070	3.11
Paralysis	556	1.61
Broncho-pneumonia	517	1.50

Typhoid fever (446) and diphtheria (339) are not shown in the foregoing list, the former being replaced by broncho-pneumonia which was unusually high in 1913. Typhoid fever and diphtheria are, however, decreasing annually, owing, no doubt, to the vigilance exercised by the public health authorities all over the Province. Deaths from Bright's disease increased by 222, making a total of 1,070. Cancer, which increased by 28, and organic heart disease which increased by 103, show an annual increase during the last five years. This is also true of Bright's disease, except for the year 1910, when a decrease occurred.

The following table shows the deaths from five active causes of death, for a decade.

TUBERCULOSIS.

The number of deaths from tuberculosis for the year was 2,294, being a ratio of 85 per 100,000 of population, a decrease of 2 per 100,000 since last year.

Of the total deaths in the Province, 6.3 per cent. were from tuberculosis, a decrease of .7 per cent. below that of 1912.

Of this number, 36.7 per cent. took place in the cities, 7.4 per cent. took place in the towns and the balance, 55.9 per cent. took place in the rural municipalities.

The following table shows the deaths from tuberculosis for the last 10 years, by ages:

INFANT MORTALITY.

The rate of mortality of infants under one year of age, per 1,000 births for the year was 117.7 as compared with 110.3 for the preceding year.

This rate applies to the whole Province. For the cities the rate is 140.3, for the towns, 148.3 and for the Province, excluding cities and towns, 95.7.

Table 13 shows the causes of these 7,596 deaths. When one observes the large number of deaths from whooping cough, 185, convulsions, 330, bronchitis, 182, broncho-pneumonia, 218, pneumonia, 301, diarrhœa, 1,851, the majority of such deaths being preventable, one is appalled by the thought of so many children slipping out of our hands through negligence and carelessness. The increase for the year is due chiefly to diarrhœa, indicating that careless methods of feeding, the use of dirty milk, and faulty training of the mothers are largely responsible. The Department through the Provincial Board of Health is making strenuous efforts each year to lessen the infantile death-rate by means of health exhibits, popular lectures, and the distribution of literature upon this question. So far these efforts have not met with the success one would like to see. It is generally conceded that educational methods are the best means at our disposal for the improvement of infant mortality. So, having this idea in view, the struggle will be kept up and present efforts increased with a hope for better things.

CENTENARIANS.

There were 10 men and 19 women who lived over the century mark.

DEPARTMENTAL WORK.

During the year there were supplied:

Birth Certificates	1,019
Marriage "	241
Death "	490
Searches	3,159

There were over 27,000 marriage certificates received and filed for reference. Over 150,000 names were indexed and filed, and 14,540 marriage licenses issued. This number, however, is but for the latter half of the year; prior to this the licenses were issued from another Department of the Provincial Secretary.

Deputy Registrar General.

Deputy Registrar-General.

TO HON. W. J. HANNA,

Registrar-General of Ontario.

REPORT UPON

Births, Marriages and Deaths

FOR THE YEAR 1914

This is the Forty-fifth Annual Report of vital statistics for the Province of Ontario, for the year ending December 31st, 1914. It shows an increase in the number of births registered during the year and a decrease in the number of marriages and deaths.

The following table shows the total registrations and makes a comparison between the number of registrations for 1913 and 1914:

POPULATION.

The estimated population of Ontario for 1914 was 2,749,840. Of this, the cities contain 1,002,320, or 36.3 per cent. of the total. The towns of over 5,000 population have 160,495 or 5.8 per cent., while rural Ontario contributes 57.8 per cent. of the whole.

It will be noted that the rates per 1,000 of population are considerably higher in the city and town municipalities than in the rural municipalities.

For the sake of comparison with other years the following table showing the total Births and Deaths in Ontario, excluding still-births, for each of eighteen years, and the ratio per 1,000 of population is appended.

1913.....	64,516	24.0	34,317	12.7
1914.....	66,225	24.0	32,440	11.8

BIRTHS.

The births registered during the year were 66,225, a ratio of 24.0 per 1,000 of population. This is the same rate as for 1913.

The cities contributed 42.6 per cent. of all births. The towns of over 5,000 population, 6.9 per cent., and rural Ontario, 50.7 per cent.

ILLEGITIMATE BIRTHS.

The total number of illegitimate births registered was 1,469, an increase of 75 over the preceding year. Of every 1,000 births which occur in Ontario, 22.3 are illegitimate. As usual, the cities contributed the larger number, 1,074, or over 73.1 of the whole, being at the rate of 38.4 per 1,000 births. The towns gave 73 or 4.9 per cent. of the whole, being at the rate of 15.8 per 1,000 births. Rural Ontario gave 322 or 21.9 per cent. of the whole, being at the rate of 9.5 per 1,000 births.

MULTIPLE BIRTHS.

There were 759 pairs of twins born; 805 of these children being males and 713 females. Of these the cities contributed 310 and the towns 52 pairs of twins. Seven sets of triplets were registered; 9 boys and 12 girls. One case occurred in Saulte Ste. Marie; one in Toronto and one in Niagara Falls. One case each occurred in the Counties of Kent, Lincoln, Renfrew and Timiskaming District.

Of all births registered, 34,031 were males and 32,194 females; or 1,050 boys to 1,000 girls.

MARRIAGES.

The number of marriages registered during the year 1914, was 24,245, or 8.8 per 1,000 of population. This number is 2,753 less than that of the preceding year, or 1.2 less per 1,000 of population.

The largest ratio is shown in Welland and Essex Counties where the Cities of Niagara Falls and Windsor respectively, are situated. In spite of the amendment in The Act respecting the Solemnization of Marriages, a considerable number of parties continue to come from the United States to be married in Canada. The Department is very particular in examining all affidavits received in registered licenses and there does not seem to be any direct evidence that the law is being evaded. It must be admitted, however, that a suspicion is prevalent in the Department that there is an indirect evasion in the City of Niagara Falls. In Windsor, however, the law is complied with in all respects.

The following table will show how this amendment to The Marriage Act has affected the ratio of marriages in the cities just referred to during the year 1912, prior to the amendment, in 1913, when the amendment was adopted (May, 1913) and in 1914 when it was in force during the entire year.

	1912 Marriages	Ratio per 1,000	1913 Marriages	Ratio per 1,000	1914 Marriages	Ratio per 1,000
Niagara Falls	839	86.7	492	40.9	291	24.9
Windsor	3,429	176.2	1,423	65.8	622	27.6

The ratio of marriages per 1,000 of population in these cities is still twice as high as the average 12.5, for the city municipalities.

The following table shows the marriages by denominations and the number of men and women claiming adherence to the denominations.

When one is making a comparison of death rates in any rural municipality it should be borne in mind that each county municipality includes any city, town or towns which may be in that county, and to obtain the county rate only, this must be considered, e.g., York County, including Toronto, shows 6,537 deaths with a rate of 11.8 per 1,000; the same county, excluding Toronto, has a ratio of 12.1 per 1,000. Carleton County, including Ottawa, has a death rate of 11.8 per 1,000 of population; excluding Ottawa, the rate is 17.3.

The death rate from organic diseases of the heart is higher than in the preceding year (2,829). The same is true of cancer (1,806).

TUBERCULOSIS.

Tuberculosis continues to occupy a most prominent place as a cause of death. The number of deaths due to this cause in 1914 was 2,340, being 46 more than for 1913. While there was a slight increase in the number over that of the preceding year, the ratio per 100,000 of population has remained unchanged, being 85.

The following table is of interest in comparing population and deaths from tuberculosis:

INFANT MORTALITY.

The number of children who died during 1914 under the age of 5 years was 8,516, as compared with 9,515 for the preceding year. This is a decrease of 999. The decrease took place in the first three years of age, while increases occurred in the latter two.

	Total	Under 1	1	2	3	4
1913	9,515	7,596	992	447	274	206
1914	8,519	6,835	808	359	305	212

In 1913, the deaths under one year amounted to a ratio of 117.7 per 1,000 births; in 1914, the ratio dropped to 103.2. This is most gratifying.

The following table shows a comparison of the death rates per 1,000 births, between 1913 and 1914.

	1913	1914
Whole Province.....	117.7	103.2
City Municipalities.....	140.3	115.9
Town Municipalities	148.3	129.9
Rural Municipalities	95.7	88.8

Excluding cities and towns

It will be observed that while the death rate in the whole Province falls much below that of cities and towns, the latter carries the highest rate of all, while that of the rural districts is lowest. It seems that the reasons for the higher death rate in towns is due to the fact that in towns less attention is paid to sanitary conditions than is the case in cities. In most cities there is a full-time medical officer of health, the supply of milk is controlled by by-law which provides for inspection of the milk and of the dairies. In some of the cities, notably Toronto, all milk is pasteurized, supplied in bottles and distributed in a most satisfactory manner. In a large number of towns, the medical officer of health is paid but a mere pittance for his services and has little or no incentive to carry out his duties properly. It is a notorious fact that the milk supply of many of our towns is scandalously filthy and consequently about as dangerous a poison as could be given a child. In addition, while cities screen and promptly dispose of manure and garbage, thus preventing the breeding of flies; in most of the smaller towns nothing is done to limit the swarming of these disease-carrying insects. In the rural districts the milk is fed fresh to children, before the disease germs have had time to multiply. The effect of the pasteurization of milk is apparent in the low death rate among infants in cities like Toronto.

Deputy Registrar General.
